4. Claims 1, 3-16 and 18-20 are allowed.
5. The following is an examiner's statement of reasons for allowance:

Regarding claim 1 the prior art of record neither anticipates nor renders obvious, "an imaging device comprising:

a window that transmits incident light into the imaging device, the incident light including a plurality of incident light rays;

an image pickup element configured to simultaneously pick up images in plural visual field directions;

an image pickup lens disposed, in a light path of incident light transmitted through the window, between the window and a front face of the image pickup element;

a first optical element disposed, in the light path of incident light transmitted through the window, between the window and arranged on a front face of the image pickup lens and having a concave lens property; and

a second optical element arranged on the front face of the image pickup lens and having no concave lens property, wherein the first optical element

Art Unit: 2622

guides lights from wide angle ranges in partial visual field directions among the plural visual field directions onto the image pickup element via the image pickup lens,

wherein the second optical element guides lights from non-wide angle ranges in the remaining visual field directions among the plural visual field directions onto the image pickup element via the image pickup lens, and wherein each of the plurality of incident light rays that is transmitted through the window is only guided through one of the first optical element and the second optical element“.

Regarding claim 16 the prior art of record neither anticipates nor renders obvious, “a vehicle circumference visualizing apparatus comprising:

an imaging device disposed at a front portion or at a rear portion of a vehicle;
an image processing section configured to perform predetermined image processing with respect to an image picked up by the imaging device; and

a display device arranged within the vehicle and displaying the image processed by the image processing section, wherein the imaging device comprises:

a window that transmits incident light into the imaging device, the incident light including a plurality of incident light rays;

an image pickup element configured to simultaneously pick up images in plural visual field directions;

an image pickup lens disposed, in the light path of incident light transmitted through the window, between the window and a front face of the image pickup element;

a first optical element disposed, in the light path of incident light transmitted through the window, between the window and a front face of the image pickup lens and having a concave lens property;

a second optical element arranged on the front face of the image pickup lens and having no concave lens property, and

wherein the first optical element guides lights from wide angle ranges in partial visual field directions among the plural visual field directions onto the image pickup element via the image pickup lens, wherein the second optical element guides lights from non-wide angle ranges in the remaining visual field directions among the plural visual field directions onto the image pickup element via the image pickup lens, and

wherein each of the plurality of incident light rays that is transmitted through the window is only guided through one of the first optical element and the second optical element”.

Regarding claim 20 the prior art of record neither anticipates nor renders obvious, “an imaging device comprising:

an image pickup element configured to simultaneously pick up images in plural visual field directions;

an image pickup lens arranged on a front face of the image pickup element; and

a first optical element arranged on a front face of the image pickup lens and having a concave lens property,

a second optical element arranged on the front face of the image pickup lens and having no concave lens property,

wherein the first optical element guides lights from wide angle ranges in partial visual field directions among the plural visual field directions onto the image pickup element via the image pickup lens,

wherein the second optical element guides lights from non-wide angle ranges in the remaining visual field directions among the plural visual field directions onto the image pickup element via the image pickup lens,

wherein the first optical element is arranged within lower area of a vertical view angle of the image pickup lens and guides light from the visual field direction of a forward slanting lower direction to the imaging device onto the image pickup element via the image pickup lens, and

wherein the second optical element is arranged within upper area of the vertical view angle of the image pickup lens and guides lights from the visual field directions of both left side and right side directions of the imaging device onto the image pickup element via the image pickup lens”.

Regarding claims 3-15 and 18-19, the claims are allowed as being dependent of claims 1 and 16, respectively.

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
